

EMF Calculations are Based upon Fundamental Laws of Physics

Nobel Prize winner in Physics Richard Feynman:

“The theory of quantum electrodynamics has now lasted more than fifty years, and has been tested more and more accurately over a wider and wider range of conditions. At present time I can proudly say that there is no significant difference between experiment and theory!

...

To give you a feeling for the accuracy of these numbers, it comes out to something like this: if you were to measure the distance from Los Angeles to New York to this accuracy, it would be exact to the thickness of a human hair. That’s how delicately quantum electrodynamics has, in the past fifty years, been checked –both theoretically and experimentally...”
